ABOUT BOWRAL BRICKS

OUR TRADITION, EXPERIENCE AND FINANCIAL STRENGTH HAS MADE BOWRAL BRICKS THE FIRST CHOICE FOR ARCHITECTS, BUILDERS, DEVELOPERS AND HOME BUYERS. OUR CONTINUED COMMITMENT TO QUALITY ENSURES BOWRAL DRY PRESSED BRICKS WILL REMAIN THE BENCHMARK FOR EXCELLENCE FOR MANY YEARS TO COME.

Bowral dry pressed bricks

Bowral dry pressed bricks are the premium product for your building project. Proven in tough Australian conditions for more than a century, dry pressed bricks are renowned for their long lasting quality.

Bowral dry pressed bricks are made to last using time-honoured techniques and modern technology. Choose the Bowral Bricks range for their unsurpassed quality that only one of Australia's largest and most experienced brick makers can offer.

Tradition of timeless quality

Bowral dry pressed bricks have been delivering timeless style and quality throughout the years, Bowral Bricks first began producing this ever- popular range in the early 1900's. Many decades later, Bowral Bricks continues to manufacture dry pressed bricks using traditional craftsmanship techniques at the Bowral manufacturing facility.

The premium building product

Bowral Bricks selects the finest quality clays and shales to create a clay mix, which is compacted into individual moulds at high pressure to produce solid and dimensionally accurate dry pressed bricks. With their solid appearance and square arris, Bowral dry pressed bricks are suitable for face work, rendering, painting, bagging and are perfect for chasing requirements.

The nature of manufacturing provides them with extremely low moisture expansion, therefore offering a very stable building material. Modern technology helps meet nationwide demand for dry pressed bricks designed for today's residential and commercial building applications.

Unique colours for authentic appeal

Earthy terracotta tones. Creamy browns and beiges. Subtle golden shades. With such an extensive colour range available, Bowral Bricks are guaranteed to add a beautiful finish to your building project. The unique colour variations in each delivery of Bowral Bricks also ensures the authentic appeal that comes only with traditional manufacturing techniques.

Shapes to suit your building needs

Bowral dry pressed bricks are available in standard shapes as well as sculptured custom shapes, allowing you to add individuality to both the interior and exterior of your development. Endless design patterns and custom colours make Bowral dry pressed shapes the perfect solution to versatile building design.

Build on our award winning reputation for excellence

Bowral Bricks brings you more than 100 years brick making experience and an unrivalled investment in the brick making technology of tomorrow. Our continued commitment to quality ensures Bowral Bricks will remain the benchmark for excellence for many years to come. Winning the John Horbury Hunt Award for excellence in brickwork many times, emphasises the high standard and quality that is found when using Bowral dry pressed bricks.

Our tradition, experience and financial strength has made Bowral Bricks the first choice for architects, builders, developers and home buyers. For more information or to discuss an upcoming project, please call us on 13 BRICK (13 2742).

TECHNICAL

details

Mortar colour | Mortar finishes

Mortar Colour

Off-white mortar is currently the most popular colour. This is made by mixing light coloured cement and white sand and results in a traditional bricks and mortar look. Mortar can be coloured by adding powdered or liquid pigments to the mortar as it is being mixed by the bricklayer. It can also be tinted to match the brick colour, giving a very even wall colour. Please confirm with your bricklayer what their mortar colouring offering is before making your final decision.

Mortar finishes

There are four common mortar finishes and these various finishes result in different shadow lines on the wall. A raked finish will create a deep shadow in the mortar joint. This brings out the horizontal lines of the brickwork (and the vertical lines to a lesser extent) and it is the most common finish. Ironed and rolled joints also create shadow lines, but these are much finer and more subtle. A flush joint doesn't allow shadow lines to form at all, giving the wall a flatter, more unified look. Using a mortar colour to match the brick will take this a step further.

EXP = Exposure grade

Suitable for use in external walls exposed to aggressive environments, such as; areas subjected to salts in the soil, adjacent material or ground water, in coastal areas exposed to attack from windborne salt spray, or retaining walls subjected to fertilisers and ground salts.

GP = General purpose

Suitable for internal and external walls only when above a sheet or membrane damp-proof course and protected by an adequate coping, eaves, roof or similar top covering. These units should not be directly exposed to saline environments.

Solar absorbance rating

In the design of energy efficient buildings, the architects and consulting engineers need to be able to calculate the heat loss or gain of materials used to construct these buildings.

For this reason, our product range has been categorised into three colour groups –

Light (L) < 0.475 Light,

Medium (M) 0.475 - 0.70 Medium,

Dark (D) > 0.70 Dark

to assist architects and consulting engineers with their calculations.

All information was correct at time of printing. For current details, please visit australbricks.com.au
