

**CENTOR
RETRACTABLE
SCREENS**

The Centor retractable screen offers an unobtrusive screening option. The screen glides smoothly across your opening when your doors or windows are open and retracts back fully when not in use.

PRODUCT FEATURES

The Centor retractable screen can be installed on sliding, bifold and hinged doors, as well as bifold windows to offer an unobtrusive screen solution.

The screen retracts into its frame when not in use to open up your views, and pulls across your opening to keep insects out and allow for ventilation into your room.

The screen can be used on doors up to 7.6m wide, and glides with fingertip operation.

The Centor screen is available with either a insect mesh or a sun filter fabric or a combination of the two (only on openings up to 3.9m wide). The Centor combination screen creates a multi-function system to provide solar control in the mornings and prevent insects entering the home during the evenings.

They are also great on bifold servery windows allowing the window to be screened when open, and easily glide the screen back when passing items in and out..
