Staying in control...

Control your climate and control your energy

By using the ZoneTouch to turn off the air in areas of your home that are not being used, the reduced area being conditioned will reach the desired comfort level much quicker and be much easier for your air conditioner to maintain.

The big benefit is that by reducing the area you are cooling or heating, you also reduce the load on your air conditioner. So with proper zoning using the ZoneTouch and with proper use, you could receive worthwhile reductions in the amount of energy your system consumes.

With ZoneTouch you can be comfortable and have a power bill that can be a pleasant surprise.

Not too hot and not too cold. Zzzzzzz...

Control the climate in your home when and where you need it most

The ZoneTouch is designed to give you complete control over the amount of air conditioning provided to all the areas of your home. You not only have the ability to turn areas on and off as needed and when you need them but also control of the volume of air delivered into each area. The control over the volume of air is so refined that you can adjust in ten percent increments.

One of the great features of the ZoneTouch is the **TURBO** function which allows you to direct most of the air to one particular area whilst not depriving other vital areas of air conditioning. So while you are enjoying the company of your friends in perfect comfort in your living room, your children can still sleep comfortably in their bedrooms.
