

Sea Lion Exclusion Device (SLED)

New PIRSA regulations require recreational Rock Lobster Pots used in the Northern zone be fitted with Sea Lion Exclusion Devices (SLED) from the 1st of November 2014. These are now the same rules for Amateur pots as for Professional pots.

For additional information visit "<http://www.pir.sa.gov.au/fisheries>"

Multislide manufacture a simple device that is easily fitted to recreational pots to ensure they comply with the new regulations.

Multislide's SLED is a simple shape made from hard drawn wire that can be clamped or welded to the base of a pot.

Kit comprises

SLED

2 cable clamps

1. Clamp or weld to the base of your pot.

Image shows a typical fitment to a commercial pot.

Device can be fitted on top of the floor of the pot (as shown) or from underneath the floor of the pot.

2. Ensure the spike is aligned vertically and in the centre of the entrance.

3. Set the height of the end of the spike by cutting to length.

End of wire must be level with the bottom of the entrance or higher. To be safe, leave it higher.

Ends of cut wire can be sharp, please de-burr the ends after trimming to avoid injury while baiting the pot or removing your catch.
