GENERAL SAFETY

Most Important - Risk Assess
Before you commence any work at your chosen work area, you should undertake some preliminary hazard identification and risk control precautions. Ideally more than one person should do this. This is undertaken by:
- Identify the hazards (e.g. 240v power drill use around wet areas)
- Assess the Risk (multiple earth paths – possible electrocution)
- Select the control measure (e.g. dries the area, use an RCD, use a cordless drill etc.)
- Re-assess the risk. (risk of electrocution now negligible)

This is undertaken to ensure that the risk control measures adopted have not introduced any new risks to the work area.

Help
If the unit does not operate or you are unhappy with its performance, return it to our Hire depot for exchange or call for assistance. Do not attempt repairs yourself. Refer to your hire contract for contact information.

SAFETY DO'S
- Do take the time to read this User Guide.
- Do not use or continue to use faulty or damaged equipment.
- Do ensure that the equipment is assembled and used according to the manufacturer's instructions.
- Do check controls and any other safety devices.
- Do make sure you hold a copy of the equipment's operating instructions.
- Do where possible operate in a clear work space free from non-essential persons.
- Do ensure you have secure footing and clear access to the work area.
- Do always keep the work area well lit with all aspects of the job easily seen.
- Do ensure correct lifting techniques are used when using or transporting any machine or equipment.

SAFETY DONT'S
- Do not operate any equipment if you are tired or suffering a medical condition, or if under the influence of alcohol or drugs which may cause drowsiness.
- Do not hurry or take risks.
- Do not operate equipment without guards correctly fitted.
- Do not operate faulty equipment. If in doubt call your nearest Hire Depot.

Hot Box Safety Instructions
Read and understand these instructions before using this equipment.

Safety Instructions for this Equipment
- Use only L.P. Gas in this hot box. Incorrect gas being used can cause explosion, placing the operator or by-siders at risk of being seriously burnt or injured by disintegrating machine components.
- Keep hands feet and loose clothing away from the hot box. Keep hot box at least 600mm clear of all combustible surfaces.
- Never continue to operate gas hot box if you can smell leaking gas. To check for gas leaks use only soapy water: never a naked flame.
- Operator or by-siders can be injured if gas lines are holed or burst. Always turn off gas immediately.
- Gas bottles should be stored securely when unloading hot box / barbecue to avoid them tipping over and possibly bursting gas lines which could be ignited by gas flame which could cause serious burns. Do not operate hot box in the presence of airborne contaminants including fumes, dust and vapors which have the potential of causing an explosion.
- Do not operate hot box Inside tents, marquees or any closed room or area.
- Ensure all guards are in place before operating machine.

Safety Equipment
The following protective equipment MUST be worn when using this equipment:
- Sturdy gloves (for changing gas connections)
- Leather boots
- Close fitting long sleeve shirt and pants

LPG Fuel Safety
- This product is highly flammable. Read this leaflet before use.
- Make sure you have the right size of regulator to fit the cylinder’s valve - ask your dealer if in doubt.
- CYLINDERS should always be stored upright so the built-in pressure relief valve can operate if necessary.
- ALWAYS use gas appliances in a well ventilated area, and preferably provide ventilation at low level.
- KEEP cylinders away from heat and ignition sources and don’t let children interfere with them.
- NEVER use any gas appliance, or store a gas cylinder, inside a property below ground level, such as in a cellar or basement. This is because LPG is heavier than air and any leaking gas will collect at low level.
- CHANGE cylinders in a well ventilated area, away from sources of ignition such as naked flames, cigarettes, car batteries etc.
- No ignition source shall be closer than 1500mm horizontally to the base of the cylinder or 500mm to the cylinder tap and relief valve.
- TREAT all cylinders, empty or full, as FULL.

General Safety
- Do not use machinery if you feel tired or under the influence of alcohol or drugs.
- Check controls for proper response. Shut down the machine if a fault is detected.
- Do not wipe plastic parts with solvents, such as petrol, thinner, alcohol and ammonia, as they will damage and crack plastic parts.
- Wipe parts with a soft cloth lightly dampened with soapy water.
- Always use the right tools. Never force a tool or attachment to do a job for which it was not designed. When using attachments, ensure they are fitted correctly and practice the operation before beginning work. Always use recommended accessories only.
