

Veterinary Specialist Services are happy to be able to offer many minimally invasive procedures, such as laparoscopic surgery.

Laparoscopic surgery involves the placement of a small portal into the abdomen which allows placement of instruments and a camera to perform various procedures within the abdomen.

Commonly performed laparoscopic procedures are liver biopsy, laparoscopic ovariectomy and laparoscopic assisted, percutaneous cystotomy to remove bladder or urethral uroliths (stones).

This advanced surgical technique is safe, effective, reduces pain and helps to speed recovery for certain procedures.

Follow the QR code to our dedicated webpage on **'Laparoscopic Surgery at VSS'**.

This webpage also contains a video of one of our specialist surgeons talking more about the process of laparoscopic surgery at VSS.

Information about our multiple payment options can be found here:
