

Dan

Dan had his front tooth knocked out 13 years ago, and has worn a denture (plate) every since. He desperately wanted to have an implant and crown placed so that he would no longer need the removable denture. Dan initially went through a phase of orthodontics which created the room for him to then have an implant and crown placed to fill the space perfectly. Dan has also undergone the Zoom in surgery whitening procedure in order to achieve the perfect smile he is now so proud of.
