

1. Prior to treatment

Tiffany

2. After tooth movement with orthodontics

3. After implant placement

4. After whitening and crown placement

Tiffany was very self conscious about the gap she had towards the front of her smile, however we needed to create more space before we could place an implant and a crown. To create the space, Tiffany went through a phase of orthodontics. An implant was then placed followed by in surgery tooth whitening and crowns were then placed on top of the implant fixture and also on the corresponding tooth to provide better cosmetic symmetry. Tiffany now smiles with absolute confidence.
