CUSTOMISED AIR CONDITIONING

Operating Instructions

The following are some simple tips on operating your new Ducted Refrigerated Air Conditioning system to ensure you achieve the maximum performance and efficiency.

- (1) Before turning on the air conditioner, ensure that there are at least two zones open;
- (2) For maximum efficiency turn the air conditioner on early in the day before the house heats up – or - use the timer to turn the air conditioner on a few hours before you get home;
- (3) If you are only leaving the house for a few hours, rather than turn the air conditioner off, leave it running and raise (cooling mode) or lower (heating mode) the temperature by a couple of degrees;
- (4) Always ensure that the doors of the rooms being air-conditioned remain open at least 300 mm to allow the air to return back to the return air grille;
- (5) Clean the return air filter approximately every 3 months;
- (6) If the system stops for any reason and a fault code appears on the control panel e.g. "E0" go to the isolator switch, located adjacent to the outdoor unit, and turn it off for 5 minutes then turn it back on. If this does not clear the fault then contact Customised Air-conditioning.

Please note: Fault codes may vary depending on brand.

Thank you for selecting Customised Air-conditioning to install your new air-conditioning system.

Kind regards,

Darren Harding
Director
Customised Air-conditioning

New Daikin Zone Controller

How to set;

1. Time
